查询BUK221-50DY供应商

BUK221-50DY

Dual channel high-side TOPFET™

Rev. 01 — 16 April 2003 Product data

1. Product profile

1.1 Description

Monolithic temperature and overload protected dual high-side power switch based on TOPFET™ Trench technology in a 7-pin surface mount plastic package.

Product availability:

BUK221-50DY in SOT427 (D^2-PAK).

1.2 Features

- Very low quiescent current
- Power TrenchMOS™
- Overtemperature protection
- Over and undervoltage protection
- Reverse battery protection
- Low charge pump noise
- Loss of ground protection
- Negative load clamping
- CMOS logic compatibility
- Current limitation
- Latched overload protection
- ESD protection for all pins
- Diagnostic status indication
- Off-state open load detection
- Load dump protection
- Internal ground resistor.

1.3 Applications

- 12 and 24 V grounded loads
- Inductive loads
- High inrush current loads
- Replacement for relays and fuses.

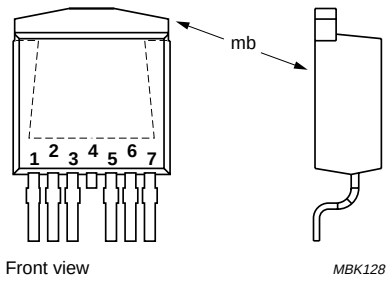
1.4 Quick reference data

Table 1: Quick reference data

Symbol	Parameter	Min	Max	Units
R_{BLon}	battery-load on-state resistance	-	90	mΩ
I_L	load current	-	4	A
$I_{L(nom)}$	nominal load current (ISO)	3.6	-	A
$I_{L(lim)}$	self-limiting load current	8	16	A
$V_{BG(oper)}$	battery-ground operating voltage	5.5	35	V

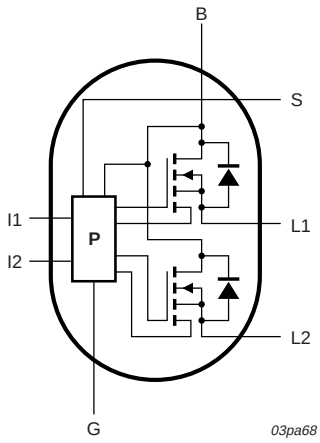
PHILIPS

2. Pinning information



No connection can be made to pin 4 (cropped).

Fig 1. Pinning; SOT427 (D^2-PAK).



P represents protection circuitry.

Fig 2. Symbol; (Dual High-Side Switch) TOPFET™.

2.1 Pin description

Table 2: Pin description

Symbol	Pin	I/O		Description
L1	1	O		load 1
G	2	-		circuit common ground
I1	3	I		input 1
B	4	-	[1] [2]	battery
S	5	O		status
I2	6	I		input 2
L2	7	O		load 2
-	mb	-	[2]	mounting base

[1] Pin 4 is cropped and cannot be connected to the PCB by surface mounting.

[2] The battery is connected to the mounting base.

4. Functional description

A diagnostic status ensures faster fault detection.

Active current limit is combined with latched short circuit protection in order to protect the device in the event of a short circuit.

Thermal shutdown for high temperature conditions has an automatic restart at a lower temperature so providing protection against excessive power dissipation.

Active clamping protects the device against low energy spikes.

Undervoltage lockout means the device shuts down for low battery voltages, thus avoiding faulty operation.

Overvoltage shutdown in the on-state protects a load such as a lamp filament from potentially destructive voltage spikes.

Table 3: Truth table

Abbreviations: L = logic LOW; H = logic HIGH; X = don't care; 0 = condition not present; 1 = condition present; UV = undervoltage; OV = overvoltage; OC = open circuit load; SC = short circuit; OT = overtemperature [1].

Input		Supply		Load 1			Load 2			Load output		Status	Operating mode
1	2	UV	OV	OC	SC	OT	OC	SC	OT	1	2		
L	L	0	X	0	X	X	0	X	X	OFF	OFF	H	both off & normal
L	L	0	X	1	X	X	X	X	X	OFF	OFF	L	both off, one/both OC or shorted to V_S or battery; Figure 10
L	H	0	X	1	X	X	0	0	0	OFF	ON	L	one off & OC, with other on & normal
H	L	0	0	0	0	0	0	0	0	ON	OFF	H	one on & normal, with other off & normal
H	H	0	0	0	0	0	0	0	0	ON	ON	H	both on & normal
H	X	1	0	X	X	X	0	X	X	OFF	OFF	H	supply undervoltage lockout
H	X	0	1	X	0	0	X	0	0	OFF	OFF	H	supply overvoltage shutdown
H	X	0	0	0	1	X	X	X	X	OFF	X	L	one SC tripped
H	L	0	0	0	1	X	0	0	X	OFF	OFF	L	one SC tripped, with other off & normal
H	H	0	0	0	1	X	0	0	0	OFF	ON	L	one SC tripped, with other on & normal
H	X	0	0	0	0	1	X	X	X	OFF	X	L	one OT shutdown
H	L	0	0	0	0	1	0	0	X	OFF	OFF	L	one OT shutdown, with other off & normal
H	H	0	0	0	0	1	0	0	0	OFF	ON	L	one OT shutdown, with other on & normal

[1] The status will continue to indicate OT (even if the input goes LOW) until the device cools below the reset threshold temperature. See "Overtemperature protection" characteristics in Table 6 "Static characteristics".

5. Limiting values

Table 4: Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134).

Symbol	Parameter	Conditions		Min	Max	Unit
V_{BG}	battery-ground supply voltage		[1]	-	45	V
I_L	load current	$T_{mb} \leq 130$ °C		-	4	A
P_{tot}	total power dissipation	$T_{mb} \leq 25$ °C		-	44.6	W
T_{stg}	storage temperature			–55	+175	°C
T_j	junction temperature			–40	+150	°C
T_{mb}	mounting base temperature	during soldering (≤ 10 s)		-	260	°C
Reverse battery voltage						
V_{BGR}	reverse battery-ground supply voltage	$R_I \geq 3.3$ kΩ; $R_{SS} \geq 3.3$ kΩ; Figure 10	[2]	-	16	V
V_{BGRR}	repetitive reverse battery-ground supply voltage			-	32	V
Input current						
I_I	input current			–5	+5	mA
I_{IRM}	repetitive peak input current	$\delta \leq 0.1$; $t_p = 300$ µs		–50	+50	mA
Status current						
I_S	status current			–5	+5	mA
I_{SRM}	repetitive peak status current	$\delta \leq 0.1$; $t_p = 300$ µs		–50	+50	mA
Inductive load clamping						
$E_{BL(CL)S}$	non-repetitive battery-load clamping energy	$T_j = 150$ °C prior to turn-off; $V_{BG} = 13$ V; $I_L = 5$ A; (one channel) Figure 13		-	60	mJ
Electrostatic discharge voltage						
V_{esd}	electrostatic discharge voltage	Human Body Model 1; C = 100 pF; R = 1.5 kΩ		-	2	kV

[1] The device will not be harmed by exposure to the maximum supply voltage, but normal operation is not possible because of overvoltage shutdown - see Table 6 “Static characteristics” for the operating range.

[2] Reverse battery voltage is only allowed with external resistors to limit the input and status currents to a safe value. The connected load must limit the reverse load current. The internal ground resistor limits the reverse battery ground current. See Figure 10 “Typical dynamic response circuit diagram including reverse supply protection and open load detection.”

6. Thermal characteristics

Table 5: Thermal characteristics

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$R_{th(j-mb)}$	thermal resistance from junction to mounting base	per channel	-	4	5.6	K/W
		both channels	-	2	2.8	K/W
$R_{th(j-a)}$	thermal resistance from junction to ambient	mounted on printed circuit board; minimum footprint	-	50	-	K/W

© Koninklijke Philips Electronics N.V. 2003. All rights reserved.

7. Static characteristics

Table 6: Static characteristics

Limits are valid for −40 °C ≤ T_{mb} ≤ +150 °C and typical values for T_{mb} = 25 °C unless otherwise specified.

Symbol	Parameter	Conditions		Min	Typ	Max	Unit
Clamping voltage							
$V_{BG(CL)}$	battery-ground clamping voltage	I_G = 1 mA		45	55	65	V
$V_{BL(CL)}$	battery-load clamping voltage	$I_L = I_G$ = 1 mA		50	55	65	V
$V_{LG(CL)}$	load-ground clamping voltage	I_L = 10 mA; Figure 13	[1]	−18	−23	−28	V
		I_L = 4 A; t_p = 300 µs		−20	−25	−30	V
Supply voltage							
$V_{BG(oper)}$	battery-ground operating voltage			5.5	-	35	V
Current [2]							
I_B	battery quiescent current	$V_{LG} = V_{IG}$ = 0 V; Figure 9	[3]				
		T_{mb} = 150 °C		-	-	20	µA
		T_{mb} = 25 °C		-	0.1	1	µA
$I_{L(off)}$	off-state load current	$V_{BL} = V_{BG}$; per channel					
		T_{mb} = 150 °C		-	-	10	µA
		T_{mb} = 25 °C		-	0.1	1	µA
$I_{G(on)}$	operating current	one channel on; Figure 5		-	2	3	mA
		both channels on		-	4	6	mA
$I_{L(nom)}$	nominal load current (ISO)	V_{BL} = 0.5 V; T_{mb} = 85 °C	[4]	3.6	-	-	A
Resistance							
R_{BLon}	battery-load on-state resistance	9 ≤ V_{BG} ≤ 35 V; I_L = 4 A; Figure 4	[5]				
		T_{mb} = 25 °C		-	73	90	mΩ
		T_{mb} = 150 °C		-	146	180	mΩ
		V_{BG} = 5.5 V; I_L = 4 A					
		T_{mb} = 25 °C		-	76	120	mΩ
		T_{mb} = 150 °C		-	150	240	mΩ
R_G	ground resistor	I_G = −200 mA; t_p = 300 µs	[6]	40	75	100	Ω
Input [7]							
I_I	input current	V_{IG} = 5 V		20	60	160	µA
$V_{IG(CL)}$	input-ground clamping voltage	I_I = 200 µA		5.5	7	8.5	V
$V_{IG(on)}$	input-ground turn-on voltage	Figure 8		-	2.1	3	V
$V_{IG(off)}$	input-ground turn-off voltage			1.2	1.8	-	V
$V_{IG(on)(hys)}$	input-ground turn-on hysteresis			0.15	0.3	0.5	V
$I_{I(on)}$	input turn-on current	V_{IG} = 3 V		-	-	100	µA
$I_{I(off)}$	input turn-off current	V_{IG} = 1.2 V		12	-	-	µA
Open current detection [8][9]							
$V_{LG(oc)}$	load-ground open circuit voltage	V_{BG} ≥ 9 V		1.5	2.5	3.5	V
$I_{G(oc)}$	open-circuit operating current	$V_{BG} = V_{LG}$ = 16 V open load detected; other channel is off		-	0.8	1.5	mA

© Koninklijke Philips Electronics N.V. 2003. All rights reserved.

Table 6: Static characteristics *...continued*

Limits are valid for −40 °C ≤ T_{mb} ≤ +150 °C and typical values for T_{mb} = 25 °C unless otherwise specified.

Symbol	Parameter	Conditions		Min	Typ	Max	Unit
$I_{L(oc)}$	load open circuit current	V_{LG} = 3.5 V; per channel		-	–22	–40	µA
		V_{LG} = 16 V; per channel		-	–200	–300	µA
$R_{L(oc)}$	open circuit load resistor	V_S = 5 V; connected externally; per channel; Figure 10		-	10	-	kΩ
Undervoltage [9]							
$V_{BG(uv)}$	battery-ground undervoltage		[11]	2	4.2	5.3	V
$V_{BG(uv)(hys)}$	battery-ground undervoltage hysteresis			-	0.5	1.5	V
Overvoltage [9]							
$V_{BG(ov)}$	battery-ground overvoltage		[12]	35	40	45	V
$V_{BG(ov)(hys)}$	battery-ground overvoltage hysteresis			0.2	1	2	V
$I_{G(ov)}$	overvoltage operating current	V_{BG} = 45 V; per channel		-	1	2.5	mA
Overload protection							
$I_{L(lim)}$	self-limiting load current	$V_{BG} \geq 8$ V; $V_{BL} = V_{BG}$; Figure 7		8	12	16	A
Overtemperature protection [9][10]							
$T_{j(th)}$	threshold junction temperature		[13]	150	170	190	°C
$T_{j(th)(hys)}$	threshold junction temperature hysteresis			3	10	20	°C
Status [9]							
$V_{SG(CL)}$	status-ground clamping voltage	I_S = 100 µA		5.5	7	8.5	V
$V_{SG(L)}$	status-ground low voltage	I_S = 100 µA; Figure 6		-	0.7	0.9	V
		I_S = 250 µA		-	-	1.1	V
$I_{S(off)}$	status leakage current	V_{SG} = 5 V					
		T_{mb} = 150 °C		-	-	10	µA
		T_{mb} = 25 °C		-	0.1	1	µA
R_S	status resistor	V_{SG} = 5 V; connected externally; Figure 10	[14]	-	47	-	kΩ

[1] For a high-side switch, the load pin voltage goes negative with respect to the ground during the turn-off of an inductive load. This negative voltage is clamped by the device.

[2] 9 V ≤ V_{BG} ≤ 35 V

[3] This is the current drawn from the supply when both inputs are LOW, and includes leakage current to the loads.

[4] Defined as in ISO10483-1. For comparison purposes only.

[5] This only applies to the R_{BLon} per channel. The supply and input voltages for the R_{BLon} tests are continuous. The specified pulse duration is t_p = 300 µs, and refers only to the applied load current.

[6] R_G is a resistor incorporated internally into the package.

[7] 5.5 V ≤ V_{BG} ≤ 35 V

[8] An open circuit load can be detected in the off-state and requires an external pull-up resistor, $R_{L(oc)}$.

[9] See Table 3 “Truth table”

[10] Overtemperature protection is not active during reverse current operation.

[11] Undervoltage sensor causes each output channel to switch off and reset.

[12] Overvoltage sensor causes each output channel to switch off to protect the load.

[13] After cooling below the reset temperature the channel will resume normal operation.

[14] The status output is an open drain transistor and requires an external pull-up resistor, R_S, to indicate a logic HIGH.

8. Dynamic characteristics

Table 7: Switching characteristics

T_{mb} = 25 °C; V_{BG} = 13 V; resistive load R_L = 13 Ω per channel; Figure 12.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
Turn-on measured from the input going HIGH						
$t_{d(on)}$	turn-on delay time	to 10 % V_L	-	30	-	µs
dV/dt_{on}	rising slew rate	30 to 70 % V_L	0.5	1	2	V/µs
t_{on}	turn-on switching time	to 90 % V_L	-	60	220	µs
Turn-off measured from the input going LOW						
$t_{d(off)}$	turn-off delay time	to 90 % V_L	-	20	-	µs
dV/dt_{off}	falling slew rate	70 to 30 % V_L	0.5	1	2	V/µs
t_{off}	turn-off switching time	to 10 % V_L	-	40	200	µs

Table 8: Capacitances

T_{mb} = 25 °C; f = 1 MHz; V_{IG} = 0 V.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
C_{sg}	status-ground capacitance	V_{SG} = 5 V	-	11	15	pF
Per channel						
C_{ig}	input-ground capacitance	V_{BG} = 13 V	-	15	20	pF
C_{bl}	battery-load capacitance	V_{BL} = 13 V	-	130	180	pF

Table 9: Short circuit load protection characteristics

T_{mb} ≤ 125 °C prior to the overload short circuit condition.

Symbol	Parameter	Conditions		Min	Typ	Max	Unit
$P_{BL(OV)(th)}$	battery-load overload power threshold	5.5 ≤ V_{BG} ≤ 35 V; device trips if $P_{BL} > P_{BL(OV)(th)}$; Figure 11	[1]	10	55	100	W
$t_{BL(d)(sc)}$	battery-load short-circuit characteristic time		[2]	200	350	800	µs

[1] Short circuit protection is latched, but at high temperatures where $T_j > T_{j(th)}$ overtemperature protection may occur first. Normal operation may only be resumed following a short circuit after the input is toggled LOW then HIGH again.

[2] Short circuit response time $t_{d(sc)}$ varies with battery-load power P_{BL} according to the **logarithmic model** equation:

$$t_{d(sc)} \approx \frac{t_{BL(d)(sc)}}{ln\left(\frac{P_{BL}}{P_{BL(OV)(th)}}\right)}$$

Table 10: Status response times

Limits are valid for −40 °C ≤ T_{mb} ≤ +150 °C and typical values for T_{mb} = 25 °C unless otherwise specified.

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
Measured from when the input goes LOW to when the status goes LOW						
$t_{d(oc)}$	open-circuit response time	Figure 10 and 14	-	65	100	µs

11. Data sheet status

Level	Data sheet status[1]	Product status[2][3]	Definition
I	Objective data	Development	This data sheet contains data from the objective specification for product development. Philips Semiconductors reserves the right to change the specification in any manner without notice.
II	Preliminary data	Qualification	This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.
III	Product data	Production	This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN).

[1] Please consult the most recently issued data sheet before initiating or completing a design.

[2] The product status of the device(s) described in this data sheet may have changed since this data sheet was published. The latest information is available on the Internet at URL http://www.semiconductors.philips.com.

[3] For data sheets describing multiple type numbers, the highest-level product status determines the data sheet status.

12. Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

13. Disclaimers

Life support — These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes in the products - including circuits, standard cells, and/or software - described or contained herein in order to improve design and/or performance. When the product is in full production (status 'Production'), relevant changes will be communicated via a Customer Product/Process Change Notification (CPCN). Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no licence or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.

14. Trademarks

TOPFET — is a trademark of Koninklijke Philips Electronics N.V.
TrenchMOS — is a trademark of Koninklijke Philips Electronics N.V.
